概要

訪問看護師の評価によれば、訪問看護利用者の14%は訪問回数が十分足りていないことが明らかになりました。回数が不足しやすいのは、身体的に自立している利用者、訪問看護利用を開始してまだ1年が経過していない利用者でした。一方、神経系疾患を患っている利用者は、回数が充足しやすいことが明らかになりました。

Abstract

Evaluations by home-visiting nurses showed that 14% of clients of home-visiting nurse services did not receive enough visits. Physically independent individuals and those who had used the service for less than one year were most likely to be receiving insufficient visits. On the other hand, individuals with neurologic disorder were shown to be receiving enough visits.
