概要

在宅看取りを進めようとチャレンジしていた、ある市町村での調査です。普段、診療所等の医師とのチームワークがうまくいっている（Relational coordination 得点が高い）訪問看護ステーションでは、病院よりも自宅で利用者が看取られやすいことが明らかになりました。

Abstract

This is a survey of municipalities that made an effort to improve at-home end of life care. We found that home-visit nursing agencies that maintain good teamwork with physicians from clinics, etc. (i.e., nursing stations with higher relational coordination scores) were more able to provide dying at home in clients' own homes than in hospitals.
